DIVING OPERATIONS, HAVE DECREASED IN DANGER .-The large number of big salvage operations that have been carried out recently have athoulated inventive brains to try to make the work of the diver easier by perfectleg old and in renting new appliances.

Perhaps the most wonderful of these applishees is, the oxyneetylene torch, which works as freely in water as it does on shore, cutting the steel plates of a ship's hall an easily as cutting through ciny.

Divers use this appliance to cut nway the rugged edges of the holes that may have been made in the hull. After this has been done a timber patch in placed over the hole, and then the hold that has been flooded is pumped out, so that the ship may be made buoyant enough to rise to the surface.

To do this job the diver must have light. This is supplied by the powerful submaring torch, which sheds a brilliant light, and the diver is enabled to move about freely, whereas in the days of the old hand-lamp he had to be wary of his steps.

The difficulty of directing operations by the salvage cugincers is overcome by the submarine photographic camera.

A farge camera is enclosed in n stee, easing, which, by an arrangement, can be focused from the outside. Powerful electric lamps form a part of the camera's equipment, so that the object to be photographed may be illuminated.

With the aid of this camera clear photographs of the damage done to a ship can be taken under water, so that the salvage engineers are able to tell exactly what tools they require.

~~~<del>~</del>

#### How Measurements and

Distances Came About Natural measurements of distances were originally taken from parts of the human body before there was any plan to form regular tables of means urement. The Inch, for Instance, developed from the exact length of the thumb Joint.

The old measurement called "the band" was the four luches acrors : person's hand, and the hand measure still is four inches. The snan, nine Inches, came from the space from the end of the thumb to the end of the extended little finger. The foot, 12 inches, came, as its name signifies, from

The cubit, an old measure of about 18 Inches, is the distance of the fore arm from the client to the end of the middle finger. The gard meant an arm's length from the chest, or a stride, belog still a simulard measure of 30 inches or b feel. The fathom, O feet, was gauged by a man's height or by his reach with both arms. The word fathom, as a terb, still means to teach or to get the depth of a body of water. The league meant at first no hour's walk, so that sow it means about three of our ordinary present

How Logs Are Salvaged Minnesola tuttledmon are realizing profils from the wasteful methods of their producestors in univaging logs which long have been under the wa ters of woodland takes to the old tim her districts, says l'opular Mechanics Marazine Millions of eighteen and twenty-foot cuts, cuttre rafts and oth er timbers in an excellent state of preservation have been pulled from the lakes with big cranes and cut into boards. Much of the word is of operior quality and it does not warp like green timber. More than 2500,000 feet of tucher was taken from one lake that year and like quantities from others. Remoral of the logs in also an aid to users of rances and motor boats.

How Bables "Navigate"

Cats and doza pace, br. a crawling laby from This interesting in farmation was recently revealed in an experiment at Johns Hopkins unt versity. The question, that bothered not only the experts but fond parents as well, was "what kind of galf do crawling bubles usel" A cat, a deg and bables of various ages were used in the experiment. The telliale slow teotion camera plainly showed that rate and dogs more in a pacing galf while babies to a tett, right trotting MAN ICH.

#### How to Silver Brass

There are authorous formulas for elireting brake erticles without the the of the electric current & on rectag pasts may be made by its solving 10 parts aliver ultrati to our parts distilled water, and 21 parts following cranide in distilled water: mis, elly and filter, Moleton for parts whilles and exe parts perfected far for with enemen of the clare to form a pasty mess, apply by a brush to the brase objects. Hinse of and dry the atticles in sandaet.

Hew to Frest Glass Glass may be freeled by the since lear by Bret cleaning the glass and then applying a thin coul of white lend whited with temperature. Then sel ttakity all over the pleas with a and of chemicists, disputing to cold

Drifting Icebergs Mark Out the Labrador Coast

that He ahead.

close is the margin between food pro-

duction and food consumption, and

how much more pressing the food

question is destined to grow in the

years of peace and racial expansion

The oceans literally teem with food.

The man who declared that humanity

is a race of herring-catchers might

have overstated the case, but that the

sea abounds in food fishes and fishes

At for food is well known. As soon

as we begin to study the subject of

ecean fisherles, however, we come up

short against the fact that what we

really know about the inhabitants of

Another phase of oceanography that

will demand and receive close atteb-

tion in the years to come is the ocean

currents. The effect of these great

rivers of the sea upon the welfare of

the human race is past imagination,

It is said that the Gulf stream carries

enough heat toward Europe every 24

hours to melt a mass of fron as large

Rear Admiral Pillsbury, describing

this remarkable river of the sen, says

that every hour there passes through

the straits of Florida the enormous

total of 00,000,000,000 tons of water

carrying enough sait to load many

times over every ship that ealls the

main. Through these straits the

stream is 40 miles wide. It carries

more water than all the streams of

the world bring down from the land

In each of the four quarters of the

globe there is a wonderful circulatory

system-the heavy, cold waters of the

polar seas rushing equatorward, and

the light warm waters of trople

oceans sweeping back, giving a huge

swirl not unlike the motion of water

driven around the bottom of a basin

Puzzle of the Ocean Currents.

Vezzels and debris caught in these

allents often max ancount flicks. In

1905 the Stanley Dollar, an American

freighter, went upon the rocks at the

entrance to Yokohama bay. Her life-

preservers were washed out as she lay

upon the beach upon which she was

In 1911 two of hor life-preservers

were picked up on the shores of the

Shetland felands, north of Scotland.

How they reached there is one of the

puzzling questions that so often arise

anent the sea. Did they sweep up the

Asiatte coast, through Behring strait.

and then through the Northwest Pas-

sage and Dallin bay, and thence by

lectond to the Shetland Islands? Or

did they, after floating through the

Northwest Passage, get into the Polar

current and sweep down the Atlantic

to the point where that ocean river

diver under the Gulf stream, to be

picked up there by the latter eur-

rent and carried to the Shetland ist

It has often been preed that the

American Indian camo to the shores

of the New world an unwilling vor-

over on the bosom of the Jopan cur-

rent. Certain it is that all of these

vant rivers of the occan have played

an facalculably important role in the

affairs of the human race, and that a

more exhaustive study of them than

has been made holds many revelations

One of the questions that is often

arked is whether a ship, sinking in

deep water, goes to the bottom, or

whether she finds her level in some

vertical depth zone and drifts on for-

ever. This question sprang into great

prominence when the Thank went

down, and was asked frequently dur-

log the World war. The answer is

she goes directly to the bottom, else

how could a dredge or a trawl be

One of the strange things that hap-

per when chips sink is that implosions

occur. These are inward burstlogs, often with a force as tremendous as

the outward bursting caused by ex-

plosions of gunpowder. As the ship

sinks into deep water, ale chambers

that do not fill up are burst inward

with a force proportionate to their

resistance. If there be corked bottles

in the stores that are not entirely full,

the corks are driven in or the bottles

With what force these implesions

occur may be gathered from an expe-

thermometer was let down into very

deep water, wrapped in protecting

cloth. When the line was drawn up

the cloth contained no thermometer.

Instead it contained a lot of im-

palpable white stuff resembling snow.

The implesion had not shivered the

thermemeter into the proverbial thou-

rand pieces; it had simply trans-

formed it into duet. Wood sent to

the bottom of the deep places of the

ocean bas its very cells invaded and

crushed and loves its busyancy.

tience of a scientific expedition. A

run to prevent her daking.

by the band.

lander

the sea is startlingly limited.

as Mount Washington.

(Prepared by the National Geographic Roclety, Washington, D. C.) LTHOUGH It may be true that the principal ship lanes of the ocean are almost as definitely traveled and marked as a Lincoln highway or a Long Island boulevard, our knowledge of the bounding

main is only fragmentary. To begin with, the area of the sea is about three times as large as that of the land. Although as long ago as 1904 the governments of the civilized world had get together some 25,000,000 observations of avery kind and sort from the logs of merchantmen, warz phips, and government vessels, and although the results of a single expedition have filled over 50 massive quarto volumes, what we know about the sea Is but the primer of the things it has

to revest. The most impressive thing about the for is its shallowness as compared with the size of the earth, and its depth as compared with the lisisht of the land. If you were to take a globe six feet in diameter and excuvate the deepest trench of the ocean thereon, It would be a bare plu scratch deepabout one-twentieth of an inch. And yet so profound are the depths of the en that the bulk of the water in it is 15 times as great as the bulk of the land that rises above its waves. In Its deepest trench the tallest mooninin on the face of the globe could be buried and ships could still pass over the spot with & half wife of water under them.

The average depth of the ocean is more than two miles—about 12,480 feet, the oceanographers estimate. On the other hand, the average height of the land is less than half a mileabout 2,250 feet. How much further beneath the waves the sea bottom fles than the land crest above them is shown by the fact that while only 1 per cent of the land rises to an altitude of 12,000 feet, 46 per cent of the ocean's floor lies under more than 12,-Och feet of water.

The relative height of the land surface and the sca bottom is about in keeping with their relative areas, there being 71 neres occupied by the sea for every 29 held by the land. If It were possible to drain off the upper 10,000 feet of the waters of the sea and to lay have the floor that lies under It, the territory thus recovered. added to the land now above the sea, would give only a fifty-fifty division between land and water.

#### Groad Continental Shelf.

The ereans as we know them are larger than the true ocean basis. As a monument is always planted on a base, so the confidents have broad undersea bases upon which to rest. To the occanographers there is a line known as the 100 fathom line, which largely parallels the shore line, but which is sometimes as much as several hundred miles out to sea. When that line is reached the bottom suddenly tegins to slope down toward the abraical depths.

The floor Ising landward from this line is known as the continental shelf. and it is upon this broad shelf, with egrales soull equil term of goings as large as that of the United States, that the confinents are planted. By overflowfor this rast area of slightly rule merged territory, the oceans gather unto themselves 10,000,000 square miles of territory that in elevation belongs more to the land than to the

As a matter of fact, the confinental shelf lies in part under water and in part above, the part above being the alturial plains of the continents. Where these plains are broad the shelf usually is broad, and where they are parrow the shelf is usually parrow. For instance, the plain on our Allantic coast is broad, and there is a corresponding breadth to the continental shelf. On the Pacific coast the alluvial plain is very narrow, and the 100 fathom line is correspondingly close to shore.

From a practical standpoint, the part of the sea of most immediate interest to man is that which rests upon the continental shelf. Here are situated all the seaboard citles. Wherever the ocean lanes may meander up and down the briny deep, they begin i on the continental shelf and end there. But for that shelf there would be no bays or guifs, no harbors and no harens, for the boundaries of the true ocean basing are infinitely more regular and less indented than the sherelines. Ocean-bound commerce would be vastly inconvenienced if it had to dispense with all the ad vaniages that the continental shelf

brings to IL

Sea Ford an Important Question, A matter that seems destined to occupy a larger place in occanographic research is the question of sea food. The World war demonstrated how

USE OF ARTIFICIAL LIGHT

<del>\*\*\*\*\*\*\*\*\*</del>

HAS AFFECTED THE EYE .-In the course of generations there will be no blue-eyed people in London-their eyes will be changed to brown. That is the prophecy of Dr. William Corbett, au eminent English eye specialist. We are suffering from over-civilization, he says. "Our eyes are not constructed for modern purposes. Many more people are affected by eye strain than was the case a few years agu."

According to Doctor Corbett about 25 per cent of the pupils in elementary schools in England have defective vision. They have to wear spectacles. "Our eyes were never intended for educational purposes by unture. but solely for purposes of selfprotection," says the specialist. "The native of North Africa has deep brown or black eyes, which enable him to stand the glare of the bright sunshine upon the sand. The northern European is equipped only with eyes of gray or tive color. His eyes are intended to receive as much fight as is available to the darker northern latitudes. He cannot

stand glare. "I hold that nature will adapt herself and produce a browncolored, protective tris in the eyes of three generations to come-descended from our modern blue-eyed parents-or we shall be more artificial than ever and wear ugly goggles with colored lenses.

#### How Rembrandt, Famous

Painter, Was Named Very few of us can trace our family names back more than 250 or 300 years for the simple reason that there were no surnames except among the wenithlest and best established famiilles until well into the Seventeenth century.

Einil Ludwig, the noted biographer, writing in Cosmopolitan, tells, for example, how Rembrandt, the Dutch

master painter, got his name. "Ills forebears had been accustomed to a life of toll as millers. The memory of their past was transmitted by word of mouth alone. They did not even have a family name, but were known merely as the sons of their fathers. Thus Rembrandt's father was called Harmen Gerritzzoon, or Harmen son of Gerrit; but because their mill stood near the Rhine and went by the same name, he added in the official

records, 'van Rijo.' "In 17 years linemen's wife brought into the world eight children, most of whom lived. Three sons had already tearned a trade when she bore her fourth. She called him Rembrandt; and since the father had by now made n home for himself, the beginnings of a family tree were formed, a step nearer to the middle class had been taken. Thus, feeling the need to give their son a real name they called him Rembrandt Harmenszoon van Rija."

#### How Birds Travel

How birds fly is now being determined by French' scientists by attaching minute recording instruments to homing pigeous. Their speed variations, wing strokes and other movements are measured. Man bireself funy fly without a motor some day, think some commentators, as a result of this study. They say man can exercise more power than should be needed for flying, if that force can be utilized as the birds use it. Three aerodynamics experts recently gave the French Academy of Science a report on experiments with their tlay Instrument. It is a mechanism 2 4-5 inches tong, 1 1-5 inches wide and 1 1-5 inches high, and weighs two ounces.

#### How Epiglottis Acts

The epiglottis is a tongue-shaped cartilaginous dap situated at the anterior border of the larynx. It used to be thought that this afructure acted as a "lid" to the largax, falling back over the laryngeal aperture in order to prevent ingress of food or liquid during swallowing.

This view was shown to be erroneous by Stuart, who proved that during awaitowing the epigiottis actually moves forward and does not fall back. Moreover, when the epiglottle in man is destroyed by disease swallowing remains unaffected, and many animals not possessing it swallow perfectly.

#### How Scent Kills Germs

Car, upholsters can be protected from germa by the scenta of common plants such as thyme and geranium, The odor of cloves kills interobes in thirty-five minutes, while typholdfever bacteria are killed by essence of cinnamon in twelve minutes.

For nearly two years upholstery in which quantities of these plants have been mixed has remained germ proof.

How Salt Affects Ice The hureau of standards says that a solution of salt in water has a lower freezing point than pure water. When salt is placed upon ice at a temperature not too far below freesing point, the ice and sait combine to form a pall polition of lawer freezo ing point that the ice. The metting of the ice absorbe heat and this lowers the temperature.

#### Light Is Moving Force of Migratory Birds

Migratory birds, says a writer in Tycos, come and go with blind punctunlity. They may be seen starting. south in the heat of the dog days, and many a first robin arrives north in a blizzard, when by stopping 100 milesfurther south he could have had warmweather.

Recent discoveries by ornithologists show that it is not the weather which starts the birds on their travels, but the shortening of the hours of day-

Birds are very sensitive to light changes. They show restlessness at the first signs of dawn, and nest with the first coming of durkness. It is not that they go to rest after being awakejust so long, for they are easily fooled by an cellpse, and poultrymen now use artificial light to stimulate egg production.

The Arctic tern is the world's champion migrant. It nests as far north as land has been discoveredsometimes only 734 degrees from the pole. When the young are fully grown-usually about August 25-thebirds leave the Arctic and a few months later are found skirting theedge of the Antarctic continent-11,-000 miles away.

This gives the Arctic tern morehours of daylight than any other antmal on the globe.

On June 21, about the time the terns arrive at the Far North nesting site, the sun has reached the tropic of Cancer and the Arctic region enjoys 24 hours of daylight. When the sun starts its trip back toward the equator, the days begin to shorten, and soon the flight southward is in full swing.

Then, on December 21, the surreaches its southernmost point at the tropic of Capricorn, and the Antarctic is illumined by the midnight sun. And shortly after the sun turns, the birds are again racing northward.

#### Why Habit of Frowning

Should Be Corrected Nothing mars a good appearance more than the nervous twitchings of Me facial muscles to which so many people are subject, points out Elicen-Bourne, well-known authority on beauty subjects, in an article in Liberty. She gives the following directions for the correction of such unsightly habits:

"First of all," she explains, "cry by n little self-aunlysis to find out why you do these things. Remember that no muscular netlou is habitual until it becomes unconscious. Therefore, to gure a bad habit, one must first learnto realize every time it is demon-

strated. "In the case of a frown or a squint," mensure is to visit the oculist. Perhaps some defect of your vision makes you serew up your eyes. When that has been corrected, purchase some court plaster. With pieces of it stuck between the eyes or at their corners, you can neither draw together your brows nor lift the cheeks in a squiat without knowing you do it. When all by sourself, put on the court plaster. Follow this by a gentle massage with cold cream, and that by an application of ice. Probably it will help tocontrol your facial muscles if you give them daily gymnastics. Also, you must learn to rest the face whenever nossible."

#### Why Inns Were Made

To get the full savor of an old lun you should come to it at aight. and best of all, winter night, or twilight, when the mists are rising ... and a log fire and a dinner seem to be the twin stars of buman aspiration. All of us know those moments, and that is why lines were made-to stand upon the pligrim's way with an understanding smile for the pligtim's weakness. They are a sign to us to shed austerity and vigilance, and to meet and mingle with our fellows; to turn from our various occasions, lofty or low, and to ease our common needs and common anxterles in kindly communion.-- From the Preface of "The Book of the Inn," selected and edited by Thomas Horke.

#### Why Music Is Valuable

Good music is a maker of men, of menners, of minds and of homes. I have watched good music work on child life, and on grown-ups, for thirty years and I am as sure as that I am writing this that one of the greatest sources for good in our homes and in our lives is good music. Music from a radio or from a player plane or phonograph is very much better than no music, but music played or song by oneself or by someone in the home is far better. So make your home a singing, playing home, for you will be more successful, happy and healthy if you do. -Henry Purmort Eames in Child Life Magazine.

Why Raven Is Black

Noah was not the only mariner who sent out ravens. Norre navigators used to carry them in cages and set them free to be followed as guides. If the birds came back, there was no land hear: If they did not return, the salp was steered the way they had gone. Iceland and Greenland are said by some to have been discovered in this ray. Noah was less wise, or more timid. The raven is reported to have been pure white until he falled to re-turn to North, when "the blackness of death tens put on him."-Louise Detecoll in the Yale Review.

delivered to Lafayette in person by

the commissioner of the general land

office. A notice in the Pensacola

Gazette of 1825 says that Colonel Me-

Kee arrived in Florida to select the

and for the famous Frenchman. La-

fayette never saw his Florida land. An :

attempt, was made to colonize this

tract by French settlers under Count

La Porte, but the scheme was unsuc-

cessful, A few years later Lafayette

made another attempt at coloniza-

tion. He sent Charles Murat, a son

of the great cavalry general and

Napoleon's sister, but be too falled.

After Lafayette's death the land was

sold by his heirs and it is now owned;

by a large number of different per-

Although pirates are hardly less common than Ashermen on some Chinese rivers, they differ from the pirates of popular juvenile fiction in that they are not particularly bloodthirsty. In fact some of China's best known government officials began life as bandits or pirates, and found it no detriment socially in after years, An incident illustrating something of the sort was told in the Dearborn Independent by William E. Barton, who has traveled extensively in the Orient. as follows:

"Only a few months ago a steam launch belonging to a Canton Christian college, loaded with students, was captured and held for ransom. The ransom was not paid. The governor of the Island of Houan, on which the college is located, assured the college people that it was not wise to pay ransom, or it would have to be done again. They will not kill, he said, When I was a robber we captured for ransom, but we did not kill," This information proved reliable, the writer continues, and the students

and launch were returned within a

"Well, that's just It," he lamented. "Neither do I. I never bowled in my life."-Pittsburgh Post-Gazette.

Industry the Keystone

A book is being talked about called "Key Men." A good deal is said in it about industry. No man becomes a key man who is not industrious. Industry is the important word. No one can become rich and prominent without it. Are you a key man? It is a good term. A key man means one who can do something worth while a little better than the sverage. The average man only "gels along," The key man gets rich. Don't imagine that you can over succeed without industry. Only loafers demand less work .- D. W. Howe's Monthly.

Didn't Lose Anything

Students of the times are quite convinced that women are rapidly grasping the business spirit of the age as, well as the llogo of commerce. The growing business aptitude of one of the gentle sex is indicated by the following incident which is reported to bave occurred very recently. A young wife, residing in Chicago, lost her husband by death and telegraphed the tidings to her parents in Maine: "John was killed in an automobile

accident this morning. Loss fully covered by Insurance."

Hard of Hearing

Arthur, Jr., age three, and his mother were in the basement of their home, mother hanging up some clothes and Junior playing with an old broom. After a while mother said: "Arthur, ton must stob sweedjuk! ton,ji kef dust all over mother's clothes." He swept shead, however,

After a little time, agains "Arthur, oldn't you hear what mother said?" Whereupon he replied: "Yes, mother, but I didn't hear you very good,"

Keep Fire Out of Woods One of the simplest details of fire prevention lies in cleaning up the woodlot to reduce the fire hazard, says the American Tree association. Cui out all the dead trees and the week trees such as cherry, bornbeam and gray birch, leaving enough partially to shade the pices. The waste brush should be piled and burned in a place and at a time when there is no danger

### World News Made Up

of Wheat and Chaff Do not be distressed overmuch by news of cvil. This is a wide, wide world. It contains much that is bad, but more that is good. Rightcousness is slowly, but surely, triumphing

If you do not helleve that, or merely have not realized it, turn for a moment to contemplation of happier things. Turn your tired eyes from the day's record of exil to the day's golden roll of honor. There is more of good news than of bad news today, every day. There is more to see on the sunny side, and it to more worth

There are only two reasons for gazing at ugly things: either that we may more fully know evil when we meet it, even in gilded robes; or that we may grapple with it and blot it

Brond highronds of honor lead to every worthy goal of life. The mud roads are in the lowlands, leading only to dissolution and corruption. If we travel the mud road it is at our own volition.

Sin is not the harvest of life. It is the chaff threshed from the wholesome grain and will be swept from the threshing floor, Why look upon the chaff when the grain is there? It some days the volume of chaft seems greater than others, know that

the threshing has been more thorough. This is a wide, wide world, and full of sweetness for those who would find IL-Helena (Mont.) Record-Herald.

## Must Have "Purchase"

Experiments have been made in a specially devised mak in order to test the truth of many stories told of ortopl attacking busin beings and drog-

to the tank with the octopus experi-"dumms" of the some specific grayity and, hidding into the edge of the place with some of its arms. It drogged its prey beneath the surface and crushed the crab shell with its nowerful laws

#### It is believed that these experiments afford proof that the octopus can drag its victims for below the sucface of the water only near rocks to which it

can attach "ta "suckers." There is one spot in the Bay of Noples where these creatures attain a large size, and now and then a fish-

#### crumn is reported missing.

Cable Construction The Western Union says that an Atinntle cable consists of a central copper wire which carries the electric current. Around this are wound flexible copper tapes, which in case of a break In the wire would carry the current around the gap. This is wrapped with a permalloy tape whose magnetic qual lifes give the cable its great speed This metallic part of the cable is first inclosed in a thick covering of guttapercha, which holds the currents to their path. Around this is a wrapping of jute, which cushions the pressure of several miles of sea water. Eightcen steel armor wires surround the cushion and protect the cable from injury. The whole is incased in an outer coating or wrapping of tarred

#### A Point Problem

hemp cords.

The chairman of a local council in freland was not an educated man. He was giving his account of the year's splendld work done by the council He read the report by the medical officer of health, and quoted the death rate as 123) per thousand.

"What does it mean?" replied the there's and the chairman, looking severely at his ques immediately.

MARY A. CHASE,

Mary Bethel, Maine. thousand inhabitants 12 have died May 16th, 1028. and 0 are at the point of death."

#### Pigs in Clover

In a district near Pretoria, pigstles made of marble and buildings cemented with pure white marble are quite common. Practically every kind of marble in found in this district, which

is about forty square miles in extent. The only reason that this valuable stone is not exploited is because of the lack of transport. The railway does not extend near the district. Stone equal to the best Parlan marble could be quarried there if the problem of transport could be solved.

## -- Having More and More

money every day is a simple proposition if you spend less than you earn and deposit the difference.

#### WHY=

#### Pet Dog Today "Makes" Bed Before Lying Down

Nearly everybody has observed that twang dogs often turn several Umes before lying down. Scientists attempt to explain this trult by the theory of erriulion. They say that our domestle dogs descended from a species of wild dog or well. These progenitors of the dog lived in the forest and in order to fand a comfortable place to rest they find to trample down the grass and ether regetation. A relic of this in-stinct still survives in the dog which durns around several times before 15-

#### Q+0+0+0+0+0+00+0+0+0+0+0+p SHE WAS IN MORBID **SECLUSION**

150 by D. J. Watch.

N A few minutes the president's perfectly gloved hand would gently let fall the gavel. The twenty-five members of the Athens Monday Bludy club were making the most of those minutes. Dainty new spring hats bobbed this way and that, eyes widened, darkened, beamed, were mer-ry, were serious. Charming voices

"Illia Condon is back, did you know?" Mrs. Phillip Corson inunaged to have a good friend of hers, Myra Munro, ne oss the half-circle of chairs

At the name, "Itha Condon," there wan a censation of the light chattering anont golf and spring cleaning and "permanents." Everybody turned to hear Myra Muoro's answer to the question from Mrs. Corson-Illia Con-

don back, rich, widowed now a year, "Yer, I know," Myrn, nodding, answered. "I was just going to ask you about her." "Well, how is she?" enruestly in-

quired Mrs. Elmer Liddell, an intenseperson who desired to do her duty by neighbor and fellow-club member,

laundress, hairdresser—everybody.
"Really, I haven't seen her," Mrs.
Corson answered. "I thought Pd run around tomorrow?"

"Test!" went Mrs. Liddell, "It looks as it also were going to atny to that morbid seclusion she affects, not let-Ung any of us know definitely about her return and all. Everybody has grief to bear. It's not fair to the world we live in to hide our heads and moorn forever. We have our duty to other people to consider,"

"Well, that's what I think!" exclaimed Mary Silcott, a bride of two months living next door to a devoted mother and father and possessed of all the material advantages even a modern bride could imagine desirable.

The rest smiled at her theory. "Well," Mrs. Corsen remarked thoughtfully, "Of course, Illia is lost without her husband. He was the positive type, it I may be allowed to say so. Life was pretty easy for Rita with Beveridge Condon running every detail of it for her. He was certainly the ideal lusband, simply devoted to

lilin in every way."
"Yes, no wonder," sighed the little plak bride, "no wonder she's just all broken up-losing him,"

"But"-Mrs. Liddell spoke in her most authoritative voice-"I think Ritz should go on doing Just as Beveridge would want her to; keep her house the beautiful thing he made tf. wear those alco, conservative clothes he liked, attend club meetings and improvements as be always helped

They all medical Mrs. Littlell was "I wonder where alic's been all these six mention? together a tioned woman, prorting amount from underneath Men. Libitie thank shoulder,

"Well-1 tellere," ventured Mrs. In New York of least part of the

"Court town to an for goles and william name, "Merician often parferred the West and appthing that a hore place the New York"

"Of course" searced Mora Moora,

"Well" - ogen flow Cerem for it ha known that who had really been more intimate with like there in the one one cine-'lli rou op and ero ber to morrow-in the country, produce and Country club function and bridge tomorrow. Couldn't you go with me.

"I can't, sold Mrs. Liddell emphatically. "I bove on interview with the major for temperaw on that new curfew plan. It's time something was being done to curb the lawicas rising

ANTIFECT AND AND Some of the other women noticed vigorous assent, others looked thoughtful, even traubled. But, the gavel falling at this tenment, no one cared to express herself concerning the un-

curted rising generation, a sore point. Almost the same group as composed the Monday Study club of Athens tuncked at the Country club on Tuesday. On the wide porch they DHOWN, W. R. C. Rs. 36, meets in talked after tunch while the committee prepared for the bridge playing Myra Munro, spinster of torons, and Ersins Corson, wife of Phillip Corson, chief lawyer of Athens, were the center of an animated brightly garbed

"You say sho's awfully different?"

"We really hardly know ber." Space was made at the functure for the impealing bulk of Mrs. Idddell in

black silk. "the Mrs. Liddell," explained group wants whose hurband was a none to Important department head in the Liddell Mortgage company, "they say Mrs. Bareridge Condon is

at bessel And abo's changed sel"
Mrs. Liddell leaked grave.
"How?" she asked succincity.
"Well," healtated livaline Corses,

"the just seems lighter—"
"If m," came from Mrs. Califolis

"I dea't mean light in a reprobensiween" continued Mrs. Carson.

"The seems easier, not so much on a Radium in Quantities strain, watching every word-you

"Oh, she is dear!" bisbbed Myra Munro. "I can hardly wait till you know all about her!"

"Well, she ought by all means to keep up her club work and her social obligations," pronopneed Mrs. Liddell. "Why didn't she come here today?" Of course several others nodded ap-

proval of Mrs. Liddell's sentiments. "Well, she didn't seem to have time."

"What was she doing?" "Digging."

"Well-really!" "Yes," continued Mrs. Corson with sparkling eyes. "She was digging in her garden and ber half was like a boy's and she had on pantal Now-Myra-you can tell about-you know what!

"Oh, those adorable children!" almost shouted Myra. "Four of them. One is a little girl that Doctor Forest told me over the phone just before I came here, had been terribly abused by somebody who had adopted her be-

"O-o-ob!" came in a thrilled pitying "She was the only really preity one

in the lot," Evaline Corson interpo-"Yes, really, that's so," affirmed Miss Munro. "The others were just

common children, you know, another zirl about thirteen-and two boys of ten and then this little curly-headed beauty of fire." "What was she doing with all those

children?" "We told you she was digging in the garden with them."

"But she's not adopting them

"She surely is! And she is giving the house over to them and she's going to supervise their education closely, study with them, all that, you know. She's got part of the lawn done into a tennis court and she's planning a lot of other changes."

"And Beveridge always said she wasn't strong enough to take care of a family! He wanted her to give up all notion of having even one child. He said she was to take her place in the social scheme as a cilizen, as a woman of leisure and wealth should-"

"Well," and Myra Munro, spinster, tossed her head, "I think she's a useful citizen if I ever saw one." "I am not at all sure that she will

make a wise mother," spoke Mrs. Elddell very, very earnestly. "She will be far from strict." "I shouldn't wonder," said the bride

of two months to Mrs. Corson, her eyes twinkling and her cheeks affush. "I shouldn't wonder if Mrs. Condon didn't know pretty much what she's about. We'd not need to be 'firm' with the rising generation if we saw to it that every child had a happy childhood. It I ever need advice as to how to raise a family I think I'll go to Mrs. Condon-and Miss Muaro!"

#### Extended Search for

Materials for Violins That ilmited output and variety of product command more than academic interest in this age of quantity production and standardization is rerealed in the present enterprise of Meholas Vasieh of Scattle.

Commissioned by Mischa Elman to create four instruments for bim, this roung riolin maker directed his scarch for woods to European cathedrais. In his quest there was an unmistabile enver of romances

The specifications require the weath "the flacet that money can hay" to the very age of come of the great church atrustures is the promise of a successful quest. For it is well known that would of contories manufact have a resupence apporter to these cur from present growth, no matter what

their grain or flice. It is not tard to believe that long association with these ancient would with the figs and extense of the race have made them the communicative

repulliories of human feeting. But it remains for the best of the master to give back those less ecstactes to the world. For nehlernment of that objective, Mr. Vasich is on

important intermediars. Ills manufacturing methods are conspicuous because he is content to take six months in scouring a continent for materials to make four units of output.-Nation's Business Magazine

Forestalling the Liner

A man to search of a quiet holiday set out in a small salling boat, his only equipment consisting of provi sions and a wireless sending set. He selled serenely for several days, until at last he aighted one of those liners which resemble small towns rather than ships. The appearance of the little boat created excitement on board the liner.

The captain was wondering whether it was a toatter of going to the rescue, when the holiday-maker moved to his wireless set and tapped out the mes-

"Is there snything I can do for

No Season for Painting

Although spring and fall are the favorite versions for outside painting, It is not necessary to put it off if the need for it becomes apparent in the summer or winter. Outside painting can be done whenever the surfaces are dry and the weather is not damp, frosty, or freezing. Best results are obtained when the temperature is between 00 degrees and 80 degrees Pahrenbelt, Painting can be done in bested balldings at any time, Cool, dry weather is best for calcimining,

Would Change Nature The Biblion proplet spoke of the wilderness and the desert place "blossoming as the rose," and the agglent-turist, by means of irrigation, has succeeded, within limits, in faililling the seer's words. But the dream of making the poles of the earth habit-

able and fruitful scoms a vala one. Yet a way has been suggested. It is not impossible, but highly improbable. It ever a method should be discovered of manufacturing radium, or if a method should be found of extracting radium from natural materials in great bulk, even the problem of fertilizing the poles, by making them temperate in climate, might and a solution.

So great is the heat produced by radium in proportion to its bulk that a quantity easily transported by manual labor would be sufficient to change the temperature of the polar regions. Indeed, if enough were taken there it would produce tropical conditions.

At present there is not a pound of radium collected in the whole world. and it is the most costly thing known, But the time may come when we shall be able to make radium from chem-Ical elements in bulk, and then many things now regarded as impossible will be easy.

#### Found "Boss" of Home Busy Washing Dishes

A local man who frequently boasts of being "the boss around his shant" is busy trying to make a certain group of women desist from spreading the tale of how he was "bossing"

the day that they called on his wife. On the day in question a group of about seven clubwomen decided to call on his "better half" to induce her to join a club which was in the process of formation. They went with some misgivings because the "lord and masfer of the establishment" had frequently stated that he was not in harmony with clubwomen and that his wife would not Join such silly affairs as long as he "was boss."

As the group entered they found his wife smoking a cigaret and reading a novel. In the kitchenette they heard n clatter of dishes and as conversation became difficult with the din that came from the crockery, the wife shouted: "Oh, John, do be less noisy when you wash the dishes."-Springfield Union.

#### Didn't Like the Color

"I can let you have 'twos,' lady, no more one cent stamps," said the man behind the window.

"No," replied the dreams eyed girl, "they won't do," and she stopped naide to allow the woman who was next in line to make her purchases. She was still standing there as the woman stopped a moment to put her supply of stamps in her purse.

"I just can't make myself use two-cent stamps," confided the girl: "they're such a dreadful color they positively make me shudder and they won't go with any kind of letter paper. I suppose I'll have to go up to the next post office, but it's better than using plats stamps."-New York

Famous Scholar

Gregor Mendel, who gave to selence the lays of heredity that have made his name immortal, was a monk in the mounstery of Konigen-klester, in Brunn, Austria. He began his work as a teacher in the technical school at Reman and continued his similes at the University of Vicana. The monastery garden was his inhuratory. where he observed the excles of reproduction in plants. In 1985 he announced his discoveries before the Natural History society of Brunn; but received to recognition. In all, be grew and studied inches plants, performing nearly 2000 crass fertilizations.

#### Bridegroom's Awful Fix

A Los Angeles bridegroom just married to a fastionable church filled with society folks discovered he had forgotten to get the license. It was an awfol had forget. The pastor immediately cut the knot be had tled, the prospective bride was hustled home by her father. Meanwhile the bridegroom was frantically canceling reservations for train and botch nocommodations in order to camp on the license bureau doorstep to complete the formalities at the earliest possible moment. And yet all he forget was the license,-Capper's Weekly.

#### Benevolent Thrush

A rare instance of birds extending a helping hand, or rather beak, to youngsters other than their own, has been reported to the California eralthological journal, Candor, by Stanley G. Jewett, of Portland, Orc. A russet backed thrush was observed to make twelve visits within four hours carrying food to a nexiful of young robins. When mother robin appeared on the scene the thrush basilly Jumped back from the nest and abowed every evi-dence of fright at having been caught at its benevolent work.

#### Oh, Peter!

Peter was playing at Johnny's house. When it was time to go home, it started to rain. Mrs. White, how ever, gave l'eter Johnny's raincoat and galoshor. "Don't take so much frouble, Mrs

White," said Peter, politely. "I'm sure your mother would do a much for Johnny," the replied. "My mother would do more," said l'eter, "She'd ask Johnny to stay to

#### The Newspaper

The newspaper, taken as a whole is the most compelling and brillian and deservedly successful phenome non in modern literature.-Arnold

#### Bell Covers for Plants

In a vegetable garden in England bell-shaped glass covers are used, one for each plant. They are more successful in most respects than hotbeds and no permanent structure is needed.

#### STANDARD OIL COMPANY OF NEW YORK

## good morning, motor"

OOD morning, Boss, Say, could you spare of me for an hour down at the garage? I don't feel just right. Shouldn't wonder If the gear shift or diffy needed some grease. Or maybe the clutch is slipping. Those birds never have much to say for themselves, but they do a lot of work and get awful mean when they don't feel right. When you have two pieces of steel working together, they are like a couple of strange bull terriers if you don't feed them plenty of oil and grease."

## MERA PLEASURE MOTORING FOR A FEW CENTS MORE A GALLON

WATCH those cars that draw up beside the Socony Special pumpnew cars with high compression motors and veterans still going strong despite their carbonized cylinders.

Their owners are paying more a gallon -for what?

Not for transportation exactly. They could save the few cents, get Socony Gasoline, be absolutely protected against fuel troubles, and match mileage and upkeep records with anybody. No, the owners of these cars are looking for something different, and getting it. They are getting a perceptible improvement in the pick-up of the motor in traffic, a little more silk in the sound of its purr, a little more power on the steep hills; and a gratifying absence of knocking.

They're getting, in brief, a new and exciting pleasure in motoring, worth far more than the few extra cents they pay. Like Socony Gasoline and Socony Motor Oil, Socony Special is tested thirteen times before it reaches your car.

Let your motor be the judge

#### NOSES WERE OUT OF JOINT

( by D. J. Walah.

HE twins were incorrigible. All the members of the Chaff family had arrived at that conclusion. They never knew what new thought was working in their fertile brains ntil it found expression in an act which threw the whole household

But for once in their strenuous little lives the twins had a real heart trouble. For weeks they had whispered together with anxious faces and Grandmother Chaff scented trouble of on unknown quantity,

"Father," she said to her husband, "I wonder what alls the twins? They are troubled, nervous, keep a watchful eye on the chimney and the way they look at the sky makes me think of the weather man. Testerday Furmer Brown's old gray goose wandered over here and they drove her into the corn crib and fastened the door: I heard Peter tell his sister that she didn't look like the right one because she had no baggage. Mayme replied that she 'might have left it on the roof.' mmediately they ran up to the garet, opened the trap door and looked all over the roof. I questioned them, but could not get the slightest clew to the mystery."

"Where is the goose?" grandfather

"I sent her home with Ned, and, ocked the crib doors," she answered. By and by the twins peeped between he slats and were surprised to find he goose gone,"

The following morning when the wins came to breakfast Grandmother Thaif was smiling mysteriously. Peter ooked at his sister and whispered, Gingerbread with sugar on it!"

"Something better than gingerread," she whispered back. "I wish he would harry up and tell us quick." Suddenly Peter's face fell. "The tork!" he faltered. "She got out

ifter all !" Grandmother laughed, for she now inderstood about the goose, sky and roof mystery. She took the twins upstairs and in the old cradle that had stood empty in the garret from their arliest recollection, lay a tiny baby. Peter looked serious and Mayme be-

"Well! This is a nice welcome for our new brother," Grandmother Chaff colded, while mother looked burt.

Peter straightened himself up. ooked out of the window, then ran from the room, followed by his sob-

"Suppose that stork had brought , refer sum to muling us they tried to grasp the new struction. Perhaps It will bring another.'

"We must do something," her brother said. "Ned told me the new baby would 'put our noses out of joint' and a new baby comes to a house. I can't see why mother wants that wrinkled.

dropped it again quickly as he saw the cradle. the red, puckered face on the pillow. "The wee ones left it," the maid, who had not seen the contents, explained.

Bayliss laughed. "The Chaff twins! They have kidnaped the new baby!" The maid took the now crying baby luto her arms and soothed it. "It's rather red," the young man

said, looking down at the tlay mite. "It's going to be a pretty baby," the "I hope so-if I have to raise it." The girl uncovered its little feet and

klssed them. "I love it," she said softly. "I'll give it to you," Bayliss laughed. She sat down in a big chair and lingged the buby close to her, "We do not care whether he likes us or not.

do we, baby dear?". The man watched her with an expression of deep content as she rocked the tiny thing to sleep. He was plannlog a future with just such a picture In it. She, too, was dreaming. He touched her hand softly and she looked up to find his eyes compelling

her. "I love you," he said. "I just love you!" and he gathered them both in his arms.

"Don't hurt the baby," she said

"Is that all you have to say to me?" She raised her eyes and he read his iltle clear to the future he had

In the meantime the baby had been missed and the Chaff family were nearly wild, for they had been unable to And a single clew to his disappearance. It was Ned who finally sug-Mayme protested. "We'll give him the | gested that the twins might have kidnaped the baby.

"They was mighty cut up about the

comin' of that baby," he said. The twins were at once pulled out of bed and questioned. Mayme rubbed her eyes and went to sleep again, but and could not be persuaded to speak. Again Mrs. Chart shook the little girl to awaken her and asked what they had done with the baby,

"The slock-made-"What did the stork do?" mother

"Made a mistake, Mrs. Bayilsse-Just then the phone rang and Mrs.

Chart ran to answer IL "We have your baby, Mrs. Chan," a soft voice said. "The darling is all right and sound asleep. Shall I send Mr. Hayliss over with bim?"

"I will be over at once," the mother answered, bastlly hanging up the

Poor feter pulled the gullt over his bend. "It is no use," he said hopeless. ly. "It's no use. Nobody wants blin but mother. We'll have to keep him and watch that stork, It's just mean enough to leave two next thme,"

Mrs. Chair hugged ber baby while she listened to the story of his abduction by the twins. "They were tensed about his coming," she said thoughtfully. "It is very unwise to lease children about things which may touch them more deeply then we know. I mean to be especially tender to my Jealous little ones."

"I'll help solve the problem by keep-ing this one," Bayliss said. "He is go-

"Oh," sighed Peter. "He is back again !"

"There were two of you to be fed, bathed and dressed, but I didn't mind, because I loved you," she said, "When little brother is larger I'll let you wheel him in the cart. He will soon be big enough to play with you and you'll have nice times together."

The twins were comforted. Peter examined Mayme's nose, then felt his own. "They were not out of Joint," he explained to his sister, "and mother before he came."

"I think he is going to be a very nice little brother," Mayme said, touchlog a tlny hand. "Mother says be looks like me." "I am going to watch the stork,"

Peter said, still somewhat stubborn, "He's left enough at this house."

Roman Smiths Expert

in Handling of Iron Roman artisans in England only two or three centuries after the time of Christ knew how to weld fron and how to Join or "solder" two pieces of iron together with copper, the institute of Metals was told at its meeting in London by Profs. J. Newton Friend and W. E. Thorneycroft of the Technical college, Birmingham. The specimen examined by them was a deep from ferrule, like a modern napkin ring, that was uncarthed during excavations of the Roman city of Uriconium. located on the Hiver Severn and de-

stroyed about 350 A. D. Lead pipe manufactured and laid to Rome's water system 1.500 years ago was pronounced to be in perfect condition by William A. Cowan, chemist of the National Lead company, Brooklyn, in a communication to the institute. Analysis showed that the same lend was used by the Homans in England and Italy.

Welcome Visitor

"Good morning, madam," said the caller, removing his hat. "I represent a laundry association. May I explain out service?"

"Certainly," replied the young woman: "come right in. I'm one of your customers. I wish you would explain it."

Why Leisure is Important Normal Americans need nothing more than lelsure-intelligently occu pled. Leisure should not mean idleness. Mere idleness deteriorates the body and mind. Leisure is time set apart from hard and fast routine John to be occupied by attention to those more important matters that put sulstance in the prind and balsh on the personality. The age of machinery is bringing more felsure. Our problem is to learn how to keep it from degeneration into more idleners.-- Grove Patterson, in the Mobile Register.

Why Gas Masks Are Vital Gas masks are worn by horses. mules and men in the Crane-Upton oil fields, near McCamey, Texas. All dellling crews, pipeline workers, truck drivers and even visitors to the field must be constantly equipped with gas masks to prevent being overcome by the fumes of hydrogen sulphine gos which emanates from the wells. This gas is almost educions and for this resson it is a greater menace to all kinds of animal life than it otherwise

#### How Ravages of Rust

Are Being Lessened . Damage caused by rust affects every department of life, including the home, but it is most serious in industry, even though it has been found possible with the aid of science to retrieve a good deal of the fron lost

na scrap. Methods of protection of exposed surfaces, particularly steel, against corrogion are among the most remarkable of recent developments in sci-

Ten years ago the annual wastage of fron and steel had reached 30,000, 000 tons, as against a mean world production rate of 50,000,000 tons. This annual wastage is rising steadlly all the time. But the enormous intensification of the research into the cause of corresion and the possibilities of protection against it has had results that are extremely promising.

How Indians Reckoned Time Most of the Indians north of Mexico did not reckon timo in years in the pre-Columbian period. They recognized the passing of the seasons for the current year, but the period of the moon was the unit of all permanent records of time. They started with the new moon. Among those tribes that counted by years and moons both little attempt was made to correlate the moons and years exactly. Some tribes regarded 12 moons as a year, and others 13. A few tribes udded an extra moon every so often. say every 30 moons, in an effort to make the moons correspond with the solar year.—Pathacder Magazine.

Why Lyric Was Rejected

An Australian poetess has decided that it is a tough trick to write for a practical minded government. A school teacher, she wrote some verses about various native birds and forwarded them to the education department in the hope that they would be Included in some of the elementary school readers. One of her characters, a crow, was made to say, "This lamb looks weak, I'll what my beak," After three months' wait this particular lyric came back with the following official notation: "Statement regarding crows not approved. Suggest lines be altered to show value of crow as check to blowny posts."

Why Known as "India Ink" "India lok" is called by that name because it was originally black pigment composed of a mixture of lamp black or burnt cork with gelatin and water, scenied with Horneo campbor and musk, made in India, Chica and Japan, It was sold in sticks.

Why Many Won't Sell Dog The prejudice against selling a dog is based on the old Hebrale Scriptural teaching. Deuteronomy, chapter 23, verse 18, forbids the bringing of the price of a dog into the house of the Lord for a row. It is branded as an abomination unto God.

Why Widows Wear "Weeds" Widow's "needs" are derived from the Saxon word "waede"-a woren garment. Later the term was conthed to the distinctive dress of a widow, and then narrowed to the love crape streamers from the boa-

# SERVICE

## from over 33,000 stations in more than 100 countries

DERMANENCY of service is a part of the sale of every General Motors product. General Motors has girdled. the world with service organizations. Authorized service: for General Motors' customers is provided through 33,0000 stations in more than 100 countries.

The fact that so many General Motors' sales each yearare made to former owners of its products is the best possible proof that the service of both the car itself and the dealer who sold it has been continuously satisfactory.

### "A car for every purse and purpose"

The new models of General Motors cars offer morequality, more performance, more comfort, more beauty, thank at any other time in the history of the automobile industry. They include "a car for every purse and purpose"-a. choice of suitable models in each price class. Check on the coupon below the car or cars about which you would like full details, then mail in the coupon. No cost-and max obligation.

CHEVROLET. 7 models, \$495 to \$715. Bigger and better than even before. 4-wheel brakes. More powerful engine. Luxurious Fisher Bodies-New hood. New Duco colors. Also truck chassis; 1/2-ton, \$395; 1-ton.

PONTIAC. 7 models, \$745 to \$875. Lowest-priced quality "six." New models improved from radiator to tail-light. 4-wheel brakes. Bodies by: Fisher, New GMR cylinder head. Increased power, Duco finish.

OLDSMOBILE. 7 models, \$925 to \$1085. "The Fine Car at Low" Price." Completely redesigned and improved by General Motors. Longer-

OAKLAND. 7 models, \$1045 to \$1375. The All-American "six." Smooth, powerful engine. Longer, lower and more beautiful bodies by Fisher, 4-wheel brakes. Every convenience. New Duco colors.

BUICK. 16 models, \$1195 to \$1995. Largest value in Buick's history.

LASALLE. 16 models, \$2350 to \$2975. Beautiful car of Continental lines. Companion car to Cadillac. V-type 90 degree 8-cylinder engine... Marvelous bodies by Fisher. Striking Duco combinations.

CADILLAC. 26 models, \$3295 to \$5500. Standard of the world. Famous 90-degree V-type 8-cylinder engine. Sumptuous bodies by Fisher and Picetwood, 500 color combinations to choose from.

L. A. Edwards, Paster 10.45. Memorial Service with aremon by the postor. His subject will be 'In Memoriam."

There are certain great days in the history of our country; but none around which elaster such tender memories as Memorial Day. It is very fitting that Zaquire of John II, Deegan, Bethel, we should gather in our chareles on this 4-6 Memorial Sanday to pay tribute to our honored dead, who through valiant service and supreme sacridee preserved add filmes with oven; in A.1 condition, the Union, broke the sbackles of the enslaved and made possible the enjoyment of freedom purchased by them at

> Very few indeed are there now with us of this noble company, but let us hope that this day will never be allowed to pass, without due recognition. The Church School will meet at 12

to great a cost.

Comrader of the Way at 7 o'clock of Union soldiers. The Ladies' Clab will meet with Mrs Whitney, on Thursday, at the usual record in our National Capital a list of nurses who served in the Civil War.

METHODIST CHURCH The Sanday School meets at 9:45

We will have no 10:45 service Sun ing the sermon.

May we not urge all our people to be present on this important occasion. The Epworth League meets Sunday WANTED-Work in small family, evening at 0:30. Topic, "Memorials, ware of invalid or aged person, where in themite or in lawred. Judi. 4:10:22; Salute to the Flag in public and private

> Mr. Herman Potter will preach at 5 7:45 Sanday evening. We know the Plag Salutes, Plag Code Leaflets, Patriotic Selections, Flag Books, Flag Code - leople will enjoy braring him. Cards, Declaration of Independence

5 years of service is only a starting point for Buick

-Skilled engineering and rugged construction make it the most durable of motor cars!

Keep in mind, when buying your newcar, that more than three-quarters of all Buicks produced in the last twentyfive years are still serving their owners.

Buick endures-Buick stays young-Buick stands up and gives its best over a longer period than any other carbecause it is endowed with an extra-rugged double-drop frame-Buick's world-famous Sealed Chassis and Triple-Sealed Engine-and the most nearly perfect oiling system ever developed.

You'll prefer Buick because it leads in beauty and luxury: and you'll prefer it, too, because it is the most durable of cars-and therefore the most paying investment.

All Buick models have Loveloy Hydranic shock absorbers, front and user, as standard equipment
